Intent là gì?

Phân loại Intent

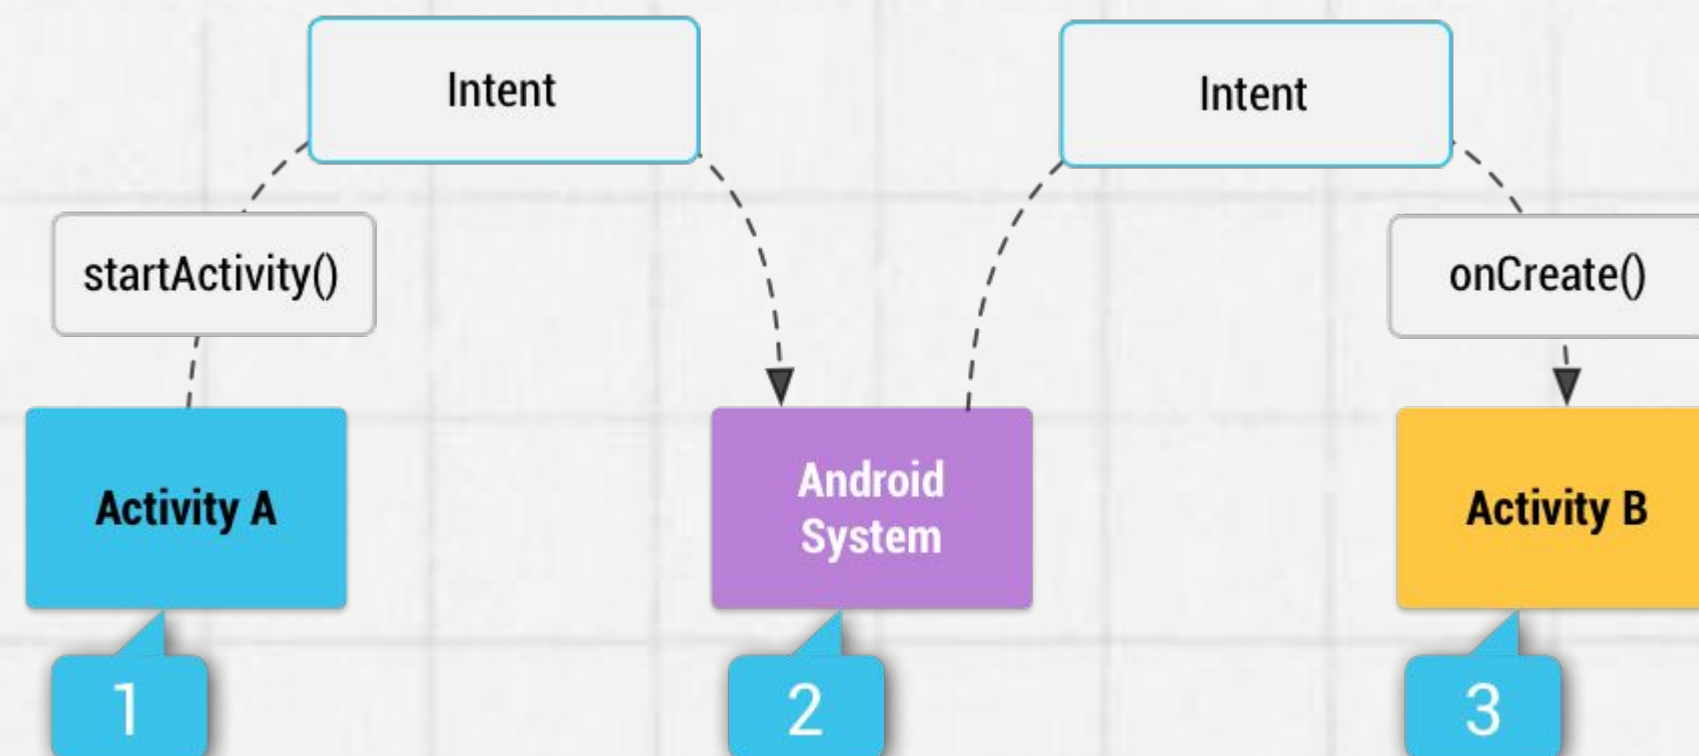

02

Cách gửi Intent

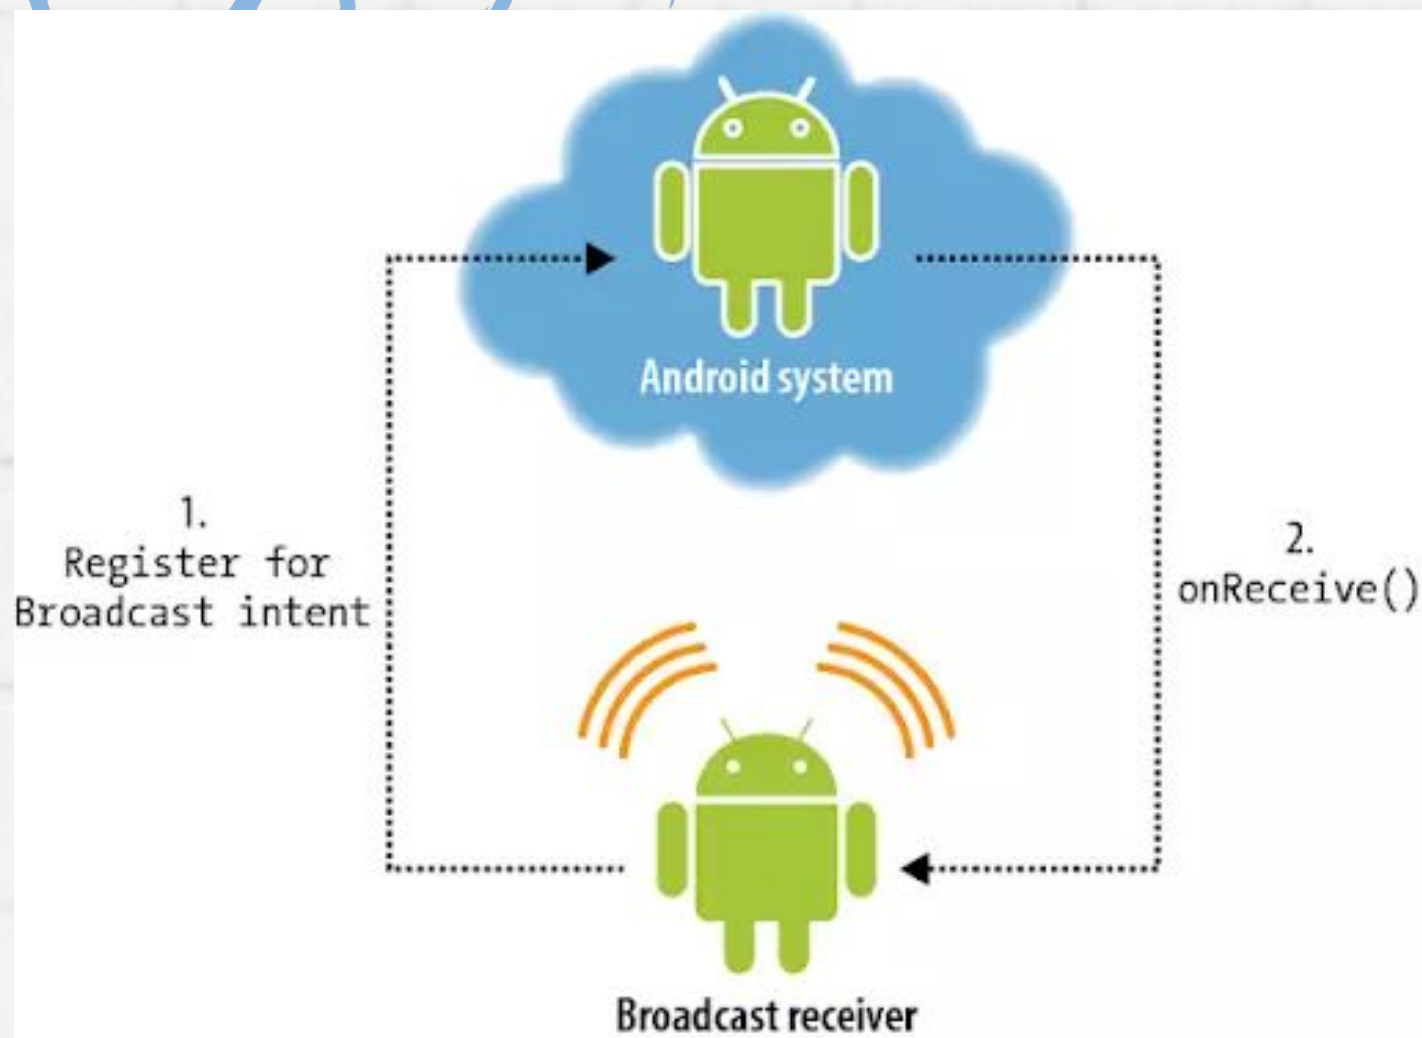

Intent

- Intent là những object tin nhắn không đồng bộ có thể sử dụng để yêu cầu hành động từ các thành phần Android khác
- Có 2 loại Intent:
 - Intent tường minh (Explicit Intent)
 - Intent không tường minh (Implicit Intent)

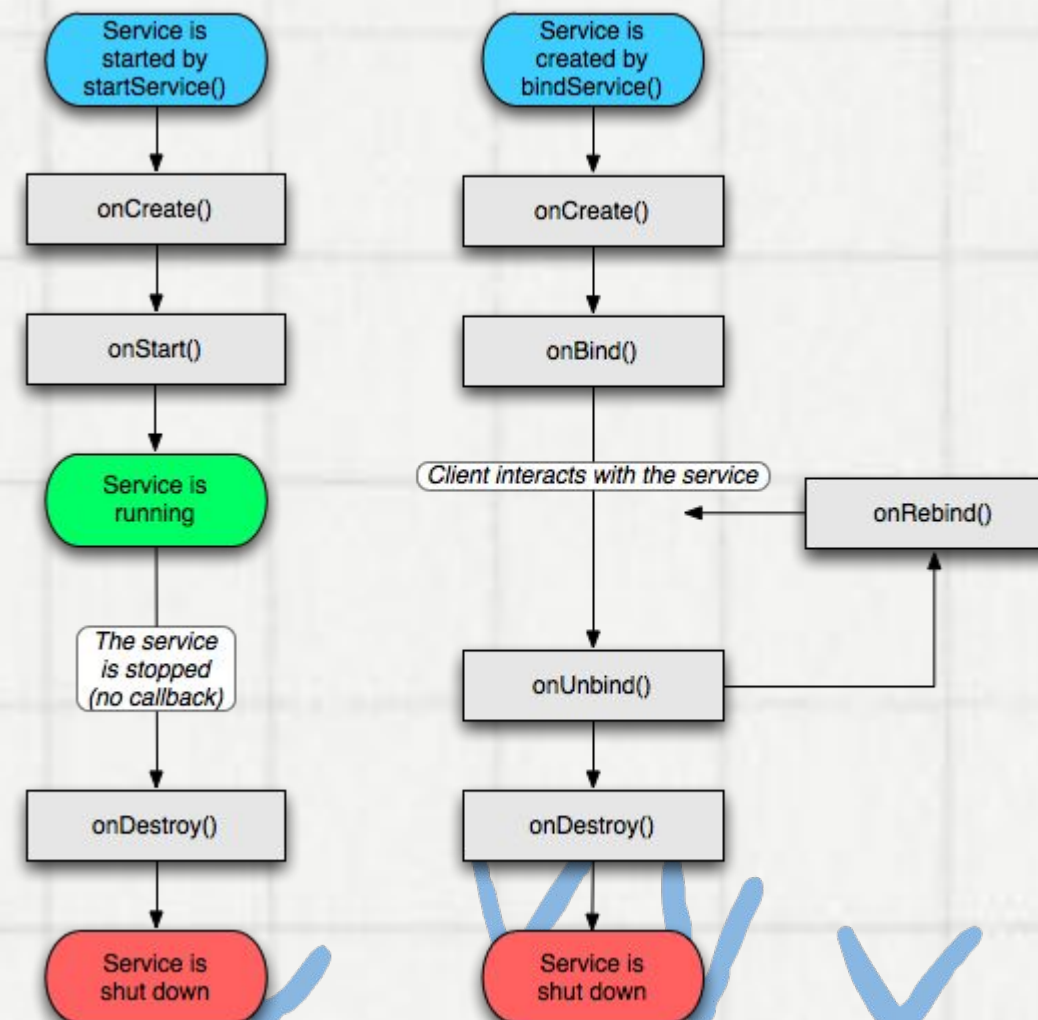

Intent có thể được sử dụng để:

Broadcast tới những *BroadcastReceiver* phù hợp

Bắt đầu 1 activity khác: *startActivity()*

Bắt đầu 1 service
Context.startService(Intent)

Explicit Intent

```
val intent = Intent(packageContext: this, OrderActivity::class.java)
startActivity(intent)
```

```
override fun onOptionsItemSelected(item: MenuItem): Boolean {
    when (item.itemId) {
        R.id.item1 -> startActivity(Intent(packageContext: this, OrderActivity::class.java))
        R.id.item2 -> startActivity(Intent(packageContext: this, SubActivity::class.java))
        else -> finish()
    }
}
```

Explicit Intent

```
D:\Users\DucNM\Android_Studio\SDK\platform-tools>adb shell
emu64x:/ $ pm list packages | grep youtube
package:com.google.android.apps.youtube.music
package:com.google.android.youtube
emu64x:/ $ |
```

```
val intent = Intent(Intent.ACTION_MAIN)
intent.`package` = "com.google.android.youtube"
startActivity(intent)
```

Implicit Intent

```
val uri: Uri = Uri.parse(uriString: "smsto:$phone");  
val intent = Intent(Intent.ACTION_SENDTO, uri);  
intent.putExtra(name: "sms_body", smsOrder);  
startActivity(intent)
```

```
val intent = Intent(Intent.ACTION_SEND).apply { this: Intent  
    type = "text/plain"  
    putExtra(Intent.EXTRA_EMAIL, arrayOf("trinhlk@vnu.edu.vn"))  
    putExtra(Intent.EXTRA_SUBJECT, value: "Test Email")  
    putExtra(Intent.EXTRA_TEXT, value: "Hello World!")
```

Intent Information

- Component Name
- *Action*
- Data => *Type*
- *Category*
- Extras Flag

```
<intent-filter>
```

```
<
```

```
</> action
```

```
</> category
```

```
</> data
```

```
Ctrl+Down and Ctrl+Up will move caret down and up in the editor Next Tip
```

```
<intent-filter>
```

```
<action android:name="android.intent.action.MAIN" />
```

```
<category android:name="android.intent.category.LAUNCHER" />
```

```
</intent-filter>
```

Intent Resolution

Intent Information

The primary pieces of information in an intent are:

- **action** -- The general action to be performed, such as `ACTION_VIEW`, `ACTION_EDIT`, `ACTION_MAIN`, etc.
- **data** -- The data to operate on, such as a person record in the contacts database, expressed as a `Uri`.

Some examples of action/data pairs are:

- `ACTION_VIEW content://contacts/people/1` -- Display information about the person whose identifier is "1".
- `ACTION_DIAL content://contacts/people/1` -- Display the phone dialer with the person filled in.
- `ACTION_VIEW tel:123` -- Display the phone dialer with the given number filled in. Note how the VIEW action does what is considered the most reasonable thing for a particular URI.
- `ACTION_DIAL tel:123` -- Display the phone dialer with the given number filled in.
- `ACTION_EDIT content://contacts/people/1` -- Edit information about the person whose identifier is "1".
- `ACTION_VIEW content://contacts/people/` -- Display a list of people, which the user can browse through. This example is a typical top-level entry into the Contacts application, showing you the list of people. Selecting a particular person to view would result in a new intent { `ACTION_VIEW content://contacts/people/N` } being used to start an activity to display that person.

Intent Information

- Categories: LAUNCHER, DEFAULT, BROWSABLE, HOME, PREFERENCE...
- Type:
 - URI (data)
 - Explicitly type
 - Scheme (http: or mailto:...)

```
val uri: Uri = Uri.parse(uriString: "smsto:$phone");  
val intent = Intent(Intent.ACTION_SENDTO, uri);  
intent.putExtra(name: "sms_body", smsOrder);  
startActivity(intent)
```

Intent Information: Extras

Bundle Object

```
putExtra|
(m) putExtra(name: String!, value: String?) Intent
(m) putExtra(name: String!, value: IntArray?) Intent
(m) putExtra(name: String!, value: ByteArray?) Intent
(m) putExtra(name: String!, value: CharArray?) Intent
(m) putExtra(name: String!, value: LongArray?) Intent
(m) putExtra(name: String!, value: FloatArray?) Intent
(m) putExtra(name: String!, value: Parcelable?) Intent
(m) putExtra(name: String!, value: ShortArray?) Intent
(m) putExtra(name: String!, value: DoubleArray?) Intent
(m) putExtra(name: String!, value: BooleanArray?) Intent
(m) putExtra(name: String!, value: CharSequence?) Intent
(m) putExtra(name: String!, value: Serializable?) Intent
Press Ctrl+. to choose the selected (or first) suggestion and insert a dot afterwards Next Tip
```

```
(m) getFloatExtra(name: String!, defaultValue: Float) Float
(m) getIntArrayExtra(name: String!) IntArray?
(m) getIntExtra(name: String!, defaultValue: Int) Int
(m) getIntegerArrayListExtra(name: String!) ArrayList<Int!>?
(m) getLongArrayExtra(name: String!) LongArray?
(m) getLongExtra(name: String!, defaultValue: Long) Long
(m) getParcelableArrayExtra(name: String?, cla... Array<(out) T!>?
(m) getParcelableArrayListExtra(name: String?, c... ArrayList<T!>?
(m) getParcelableExtra(name: String?, clazz: Class<T!>) T?
(m) getSerializableExtra(name: String?, clazz: Class<T!>) T?
(m) getShortArrayExtra(name: String!) ShortArray?
(m) getShortExtra(name: String!, defaultValue: Short) Short
Press Enter to insert, Tab to replace Next Tip
```

Serializable

Parcelable

Intent Information: Extras

```
package com.example.app1

import android.os.Parcelable
import kotlinx.parcelize.Parcelize

@Parcelize
data class Person(val name: String, val age: Int) : Parcelable
```

```
val myPerson = Person(name: "Minh", age: 90)
val intent = Intent(packageContext: this, SubActivity::class.java).apply { this: Intent
    putExtra(name: "person", myPerson)
}
startActivity(intent)
```

```
override fun onNewIntent(intent: Intent?) {
    super.onNewIntent(intent)
}
```

```
val myPerson: Person = if(Build.VERSION.SDK_INT >= Build.VERSION_CODES.TIRAMISU)
    intent?.getParcelableExtra(name: "person", Person::class.java)!!
else
    intent?.getParcelableExtra<Person>(name: "person")!!
```

**Cảm ơn mọi người
đã lắng nghe!**
